

# proposed masterplan

## summary

with subtle and naturally inspired interventions the Dog Kennel Hill open space can be enhanced to improve access and biodiversity for people and wildlife to share and enjoy.

## additional notes:-

- wildlife interpretation boards could be discretely installed with information about the wildlife and habitat found in the park
- bird and bat boxes to be placed appropriately on trees
- log piles to be placed discretely across the hedgerows
- mini beast mansions to be built and positioned where the community can observe and maintain them
- existing benches should be either replaced or sanded down and treated with wood preserve
- rubbish and dog bins should be placed nearer entrance and access points
- community nature days can help the local community to learn about and maintain the habitat in the park
